

OVERVIEW

Although diabetes and pre-diabetes are worldwide problems, the cut-off point for measures of hyperglycemia are different between races and there are differences in attitudes to care - further exaggerated by economic, cultural and social factors. Health inequality in the community is responsible for poorer outcomes for those with diabetes from certain ethnic or racial groups, those from lower income households and those who attain a low standard of education. Tackling disparities in diabetes healthcare is, therefore, a major global goal of the diabetes community, ensuring all patients, irrespective of race, ethnicity or income receive the best care. However, the health inequality caused by racial, ethnic or social differences is difficult to address, and requires sensitivity and perseverance from healthcare professionals, as well as the latest information and guidelines to support decision-making. This live webinar will describe the current gap in the care of diabetes in ethnic minorities, suggesting strategies for healthcare professionals to identify those who are not engaging with diabetes treatment or those who are currently marginalised in healthcare.

LEARNING OBJECTIVES

By attending this live webinar, participants will:

- Increase their awareness of healthcare disparities relating to metabolic disorders among different ethnic groups
- Understand the factors responsible for healthcare inequality
- Learn effective strategies to ensure all patients have access to support for their diabetes and pre-diabetes.

TARGET AUDIENCE

This webinar is designed for Diabetologists, Endocrinologists, General Practitioners, Internists and specialists involved in the diagnosis and management of patients with diabetes.

CONTINUING MEDICAL EDUCATION

The Diagnosis of diabetes in ethnic minorities: challenges and strategies to bridge the care gap, Rome, Italy, 17/07/2021 has been submitted for accreditation by the European Accreditation Council for Continuing Medical Education (EACCME).

CHAIRMAN

Ernesto Maddaloni

Department of Experimental Medicine
University of Rome "La Sapienza"
Rome, Italy

LANGUAGE

The official language of this live educational activity is English. Simultaneous translation into Spanish and Mandarin Chinese will be provided.
