

CONGRESS REPORT ESPE (15-17 September 2022)

OVERVIEW

The ESPE 2022 Annual Meeting is a meeting of paramount importance for all healthcare providers and researchers involved in the field of pediatric endocrinology and growth disorders. As we are witnessing a steady advancement in molecular biology possibilities, a new approach to diagnosis and management of endocrine disorders in children is needed. In fact, this great advance is giving health care providers the possibility to personalize their clinical approach differently to each patient, so that the best clinical management is provided. This congress report will describe and analyse the most relevant findings in endocrine and growth disorders in children, especially focusing on the impact of genetic and genomic approaches on paediatric endocrine conditions.

LEARNING OBJECTIVES

From reading this congress report, delegates will be able to:

- Review the information about the most recent findings in endocrine disorders of children
- Identify the most recent advances in terms of diagnosis and treatment for children with growth disorders
- Estimate the great contribution of the genetic and genomic approach on clinical management
- Learn how to employ a tailored approach based for each patient

TARGET AUDIENCE

This activity is designed for all healthcare providers and researchers involved in the care of children and adolescents with endocrine and growth disorders. The content will be particularly relevant to pediatricians, endocrinologists, genetists, general practitioners, and nurses involved in the care of these patients.

LANGUAGE

This activity will be in English.

FACULTY

Tommaso Todisco

Endocrinology Unit,
IRCCS Ospedale Pediatrico Bambino Gesù,
Rome, Italy
