

The 2024 Digital Learning Journey on Growth Disorders

VIRTUAL ANIMATED CONVERSATION

LAUNCH DATE: 20 June 2024

Episode 1: Diagnosis of GHD, provocative GH test

Novel diagnostic approaches and therapeutic landscapes in children with growth disorders

OVERVIEW

Recent advancements in diagnostic methodologies and therapeutic strategies for growth disorders in children have ushered in a new era of precision medicine. Cutting-edge techniques such as genetic testing and biomarker analysis offer unprecedented insights into the underlying mechanisms of these conditions. Moreover, innovative therapeutic landscapes, including targeted hormone replacement therapies and growth-promoting agents, hold promise for personalized treatment approaches tailored to each patient's specific needs. By integrating these novel approaches into clinical practice, healthcare providers can optimize outcomes and enhance the quality of life in children affected by growth disorders.

LEARNING OBJECTIVES

- Identify potential pitfalls of GH provocative test
- Update on new possibilities for diagnosis of GHD

TARGET AUDIENCE

Endocrinologists, paediatric endocrinologists, paediatricians, health care providers involved in the management of growth disorders

LANGUAGE

English with Spanish voice over

MEDICAL ADVISOR

**Tommaso Todisco**

Endocrinology Unit
Lausanne University Hospital
Lausanne, Switzerland

FACULTY

**Marco Cappa**

Research Area for Innovative Therapies for
Endocrinopathies
Bambino Gesù Children's Hospital IRCCS
Rome, Italy
