

The 2024 Digital Learning Journey on Thyroid

OVERVIEW

Thyroid disorders are among the most prevalent endocrinological diseases, impacting several aspects of human health with different degrees of severity, ranging from decreased quality of life to severe illnesses. As hormonal homeostasis changes during women's lifespan, the clinical meaning of thyroid dysfunctions varies in the different life stages (growth, puberty, reproductive age, pregnancy, perimenopause, menopause, elderly...). The 2024 Digital Learning Journey proposed by Scientific Seminars International is an educational activity about thyroid disorders during key stages of women's lives.

LEARNING OBJECTIVES

- Recognize the consequences and treatment options of hypothyroidism during pregnancy
- Recognize clinical manifestations and treatment strategies of hypothyroidism during menopause

TARGET AUDIENCE

Endocrinologists and gynecologists
